

Door type E

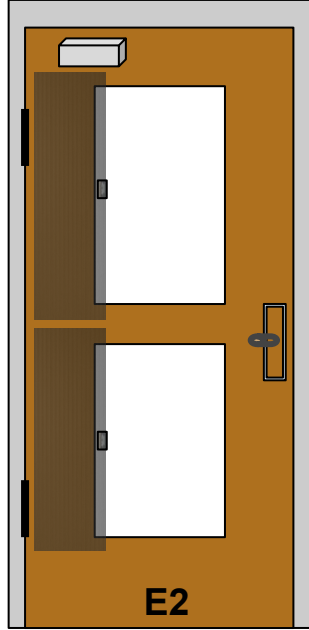

(center glass with two glass panels)

This door requires a Multi-Fold Shelter Shutter. When the glass is wider than 16 inches in a 3 foot-wide door, some glass will be blocked permanently as suggested in the transparency below.

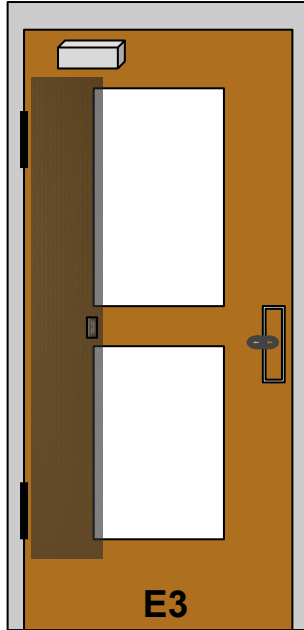

E1

This solution has the bottom glass permanently blocked and the top glass with a working shutter. This seems to be the favorite of law enforcement, since it is the most simple solution and the quickest to use.

E2

This solution has working shutters on both the top and bottom glass panels. With working shutters on the top and bottom, you can choose to leave the bottom closed if wanted or it can be opened if more view is required.

E3

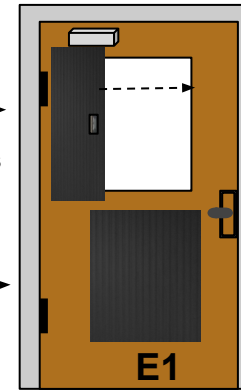

This solution has one long working shutter that covers both glass panels. Because of the size of this shutter, we recommend professional installation.

The Multi-Fold Shelter Shutter has three layers. One section installs to the door alongside the glass and the top two layers fold across the glass (bi-fold).
