Stationary Shutter section
(shown translucent)

Moving shutter section

Moving shutter section

#2. SHUTTER LENGTH

#3.RAISED WINDOW FRAME

STEEL _____
 WOOD _____
 ALUM _____
 NONE _____

#4. QTY SAME

M = Magnet Locations in Shutter
(REQUIRED CONTACT POINTS ON DOOR)

#1. Measure for **shutter width** by starting about 1" from the hinge side of the door and ending at the outside edge of the molding/frame around the door glass as shown above.

#2. Measure the **shutter length** by starting at the top of the molding/frame and ending at the bottom as shown above.

NOTE: If the door is completely flat with no raised or bumped out molding/frame around the glass, be sure to cover the glass enough for our magnets (M) on the top, bottom and side to grab the steel adhesive discs (magnet receptors) that come with the shutter.
(1-½" overlap recommended). Make note of door closers or handles if applicable.
