IMPORTANT
The size of a
Single Fold
Shelter Shutter
is based on the
moving
section only.

Example:
8"x32"
Outside
Edges of
Glass Frame
= 8"x 32"
**Shutter
Size**

#1. The **shutter width** for this type door is the same as the outside edges of the molding/frame around the glass, as indicated by the arrow.

#2. Measure the **shutter length** by starting at the top of the molding/frame and ending at the bottom, as shown above.

(M) = Magnet Locations in Shutter
(REQUIRED CONTACT POINTS ON DOOR)

If there is no steel window molding/frame around the glass, be sure to make the shutter wide enough for the magnets in the shutter edge to contact the steel adhesive discs supplied. These discs act as magnet receptors on the door.

NOTE: If the door is completely flat with no raised or bumped out molding/frame around the glass, be sure to cover the glass enough for our magnets (M) on the side to grab steel. Make note of door closers or handles if applicable.
